Form Input

Complaint Reporting Form

The information you submit will be forwarded to DEQ environmental enforcement personnel. If you send a complaint to the wrong office, it will be referred to appropriate staff.

Type of Complaint Submitting
Water Pollution Complaint

Owner Location Information

Please be as exact and specific as possible. If you can't provide an exact address, include information such as the distance from road and whether the concern is visible from the road. Describe landmarks such as nearby streams, buildings and roads.

Is the Property Owner/Building Name known?
Yes

Property Owner (if known)
Lennar

Location
Inside Stokenbury Farms Subdivision
Elkins, AR 72727

County
Washington

Select Coordinates
36.01375384911162,-94.01755185872378

Intersection of Jessica Leigh and Bayli Ln - Inside Stokenbury Farms Subdivision, Elkins, AR

Water Pollution

Description of Problem (in Detail)
I wanted to provide a small amount of supplemental documentation from this morning's minor rain event within the section of Stokenbury Farms currently under development near Jessica Leigh Street, Bayli Lane, and Kevin Lane.

The attached photographs and videos document storm-drain inlet conditions, roadway drainage conditions, and runoff pathways observed during active rainfall.

The inlet protection measures observed during this morning's rain event appeared substantially similar to those previously documented during the July 11, 2026 rain event. Several photographs appear to show sediment-laden runoff within the curb-and-gutter drainage system and runoff entering storm-drain inlets during the event.

I am not drawing any conclusions regarding compliance and am providing these materials for documentation purposes only. Because previous discussions have involved storm-drain inlets, runoff pathways, and sediment transport within the subdivision, I wanted to ensure these observations were available for review and association with the appropriate file as applicable.

Additionally, I observed that the protection measures previously present at the McGowan construction area appeared to have been removed. I am not drawing any conclusions regarding the appropriateness of the removal and am providing the observation for documentation purposes only.
Thank you for your continued time and attention to these matters.
